FORM WA-470 (7-84) (Edition of 3-84 is obsolete.)

Attachment: 9201 Soybean (April, 1986)

Exhibit A: Variety 9201 evolved from a cross of B216 X Williams. It is an F6-derived variety which was advanced to the F6 generation by modified single seed descent. The F7 progeny row of 9201 was grown in Iowa during the summer of 1980. Subsequently, 9201 has undergone five years of extensive testing and purification. It has been observed by the breeder to be uniform and stable for all plant traits from generation to generation, with no evidence of variants.

3 acres of 9201 (breeders seed) were grown in 1984. 70 acres of parent seedstock (foundation seed equivalent) were grown in 1985.

Exhibit B: Variety 9201 is most similar to variety B216. However, 9201 is significantly shorter than B216 by 6 inches (see table 1), and is significantly larger seeded than B216 by 3.8 G/100 seeds (see Table 2).

Exhibit E: Pioneer Hi-Bred International, Inc. is the sole, original, and first breeder of the '9201' variety of soybeans for which it solicits a certificate of protection.
